**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 13-23 and 25 allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Prior art failed to establish retardation plate/polarizer/holographic film/diffusion film configuration in addition to the alignment film.

2. Claims 2-8 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1, 9-12, 24 and 26 rejected under 35 U.S.C. 103(a) as being unpatentable over Kubo et al. (6,124,919) in view of Maruyama et al. (6,667,788) in view of Davis et al. (5,829,029).

Regarding Claims 1, 10, 11, 12 and 24, Kubo et al. disclose a half reflection type liquid crystal display device having matched phase of transmitted and reflected light where in Fig. 2, a lower polarization plate 9 as light absorption layer, electrodes 4 and 6, color filters 12, retardation film 10, polarizing plate 11 and diffusing plate 15 are disclosed.

Art Unit: 2826

Kubo et al. fail to disclose the required cholesteric color filter and the holographic film. However, Maruyama et al. disclose a method for producing image on liquid crystal panel, liquid crystal panel and liquid crystal equipped with the same where in Fig. 3, layer 103 are the cholesteric color filter layer. Furthermore, Davis et al. disclose an illumination system and display device where in claims 20-22 the required holographic film is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required cholesteric color filter and the required holographic film in Kubo et al. as taught by Maruyama et al. and Davis et al. respectively, in order to have a liquid crystal display device with higher performance.
